

HSE Risk Management

Risk Assessment studies carried out at SOCAR Turkey, in accordance with both national legislation and the relevant SAFE HSE Management System principle, by; identifying hazards prior to the activity, determining and analyzing risks involved within these hazards, deciding on risk control measures and implementing, documenting, revising and, where necessary, completely renewal and recording of all stages. While conducting Risk Assessments, it is ensured that all of the relevant employees are included in the process at every required stage.

Depending on the hazard classification of the activities undertaken, Risk Assessments must be reviewed at regular intervals set by the legislation. However Risk Assessments are reviewed and revised as necessary in the light of; changes in the technology or substances and equipment used at workplace, incidents, occupational disease or near miss events, a legislative change related with the activities, workplace hygiene requirements and health surveillance, in case a new danger arises outside the workplace that may affect the activity.
